

## The Ashland

The garage and bedroom extend from the front of this three bedroom home, drawing you visually into the entry way. Brick and stucco are used to further enhance these different depths. Arched openings and columns add an artistic and classical flare. This same attention to detail is seen on the inside of the home.

- 1) Front view of completed house.
- 2) Setting the beams.
- 3) First Roof Panel Installed and Secured.
- 4) All Roof Panels are installed and secured.
- 5) Brick layers create the front facade, tan siding is applied directly to the Snap-N-Lock™ Panels on the sides and back walls of the house.
- 6) Close-up of duct work placed “inside the envelope” which is crucial to the energy efficiency of this model.
- 7) Close-up of furring channels.
