

3 Car Garage with Extended Bay 36' x 24'

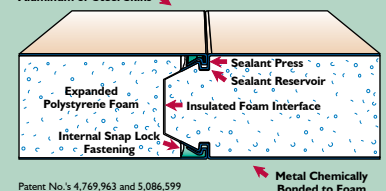

Structall offers a complete line of precut and preengineered garage packages utilizing structural insulated panel (SIP) technology. All packages erect quickly, are stronger than conventional framing, and are extremely energy efficient.

The high energy efficiency of Structall's patented Snap-N-Lock™ panel is due to the continuous foam interface design at the panel joint. The joint also allows for faster & easier installation - the male and female edges of the panel snap together quickly & easily.

Snap-N-Lock™ panel structures also withstand wind and storm damage better than conventionally built structures.

Snap-N-Lock™ Insulated Panel

Your Choice of Aluminum or Steel Skins

Patent No.'s 4,769,963 and 5,086,599

Metal Chemically Bonded to Foam

The expanded bay on this three car garage design greatly increases the amount of room for large equipment like riding lawnmowers, or allows for a bigger workshop area.

Plans and specifications are subject to change without notice. All dimensions are approximate.
