

Carport with Storage

12' x 28'

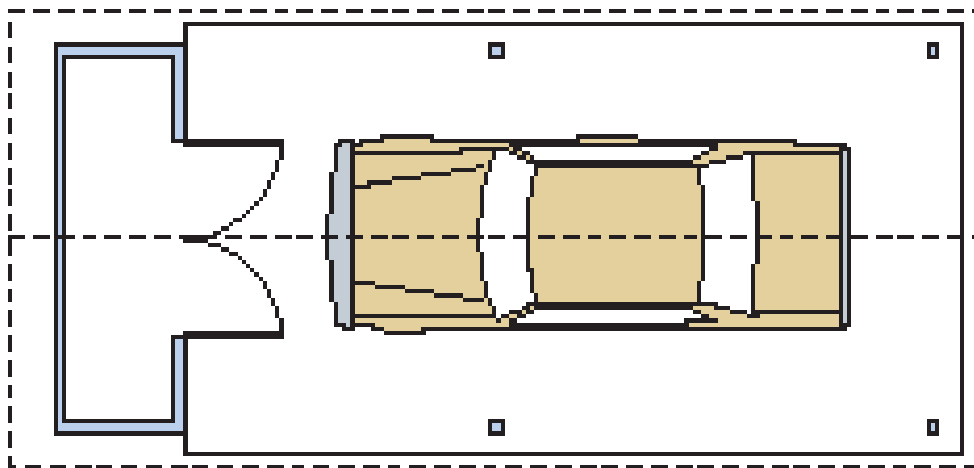

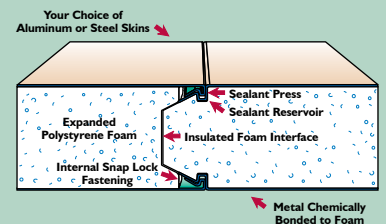

Structall offers a complete line of precut and preengineered garage packages utilizing structural insulated panel (SIP) technology. All packages erect quickly, are stronger than conventional framing, and are extremely energy efficient.

The high energy efficiency of Structall's patented Snap-N-Lock™ panel is due to the continuous foam interface design at the panel joint. The joint also allows for faster & easier installation - the male and female edges of the panel snap together quickly & easily.

Snap-N-Lock™ panel structures also withstand wind and storm damage better than conventionally built structures.

Snap-N-Lock™ Insulated Panel

Protect your car from rain and sun with this inexpensive carport. The Snap-N-Lock™ insulated roof panel system offers better protection from heat and sun than wood or pan systems can provide. The storage area also stays cool & protected.
